CHRISTIAN A. GOMEZ DIAZ

San Bernardino, CA | (951) 483-3847 | christiangomez811@gmail.com
linkedin.com/in/christian-gomez-81b231173 | github.com/Christian101GTZ | Portfolio

CS senior (May 2027) with a merged PR in an Academy Software Foundation project. Seeking new-grad software/AI roles.

EDUCATION

California State University, San Bernardino — B.S. in Computer Science, Minor in Data Science — Expected May 2027

- GPA 3.66 | Dean's List every semester

San Bernardino Valley College — A.A.S. in Computer Science — May 2024

SKILLS & CERTIFICATIONS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS | **Spoken:** English, Spanish (bilingual)
Web & Backend: React, Vite, Flask, REST APIs, Supabase, PostgreSQL, SQLAlchemy
AI/ML: RAG, LLM agents, LangChain/LangGraph, Hugging Face Transformers, Sentence Transformers, ChromaDB, Ollama
Testing & Tools: Pytest, Vitest, Git/GitHub, Docker Compose, Playwright
Certifications: CodePath AI Engineering & Web Development (Honors, 2025–26); Google Cloud Foundations (2025)

OPEN-SOURCE CONTRIBUTIONS

DNA, Academy Software Foundation — PR #260, merged into main, Nov 2026 | *TypeScript, React, Vitest* — Fall 2026

- Fixed Issue #127 in the "Regenerate notes on version change" setting: returning to a shot version that already had an AI note fired another AI call. Reproduced it with a failing test, traced it to one React hook that checked the setting but not whether a note existed, and limited generation to versions with no note.
- Found a second gap by trying to break my own fix: leaving a version before its note finished generating discarded it, so the next visit regenerated it. Fixed it in the same hook with a test that fails on the old code; 5 Vitest tests total, merged after one maintainer review round.

PathReview — PR #546, opened; repository since archived | *Python, Pytest* — Summer 2026

- Added regex patterns so the ingestion pipeline recognizes JavaScript and TypeScript from the code itself, not just the file name (Issue #148). Caught and fixed a bug in my own PR: my pattern for Python's str also matched TypeScript's string type.

PROJECTS

PS5 Game Discovery RAG | *Python, Sentence Transformers, ChromaDB, Groq, Gradio* | GitHub — 2026

- Built a RAG pipeline over 10 sources (212 chunks): MiniLM embeddings, ChromaDB retrieval, a reranker, and Llama 3.3 70B answering from the top 5 chunks. Every answer names its sources.
- Improved retrieval by switching to one game per chunk after multi-game chunks made results worse; scored retrieval and answers separately.

The Archive — Full-Stack Media Preservation Platform | *React, Vite, Supabase (PostgreSQL)* | GitHub | Live Demo — 2026

- Launched an app where signed-in users post, edit, search, vote on, and comment on media, with images in Supabase Storage and Row Level Security policies that stop anyone from changing data that isn't theirs.

VibeCheck — Hybrid AI Music Recommender | *Python, Streamlit, Gemini 2.5 Flash* | GitHub — 2025 – 2026

- Gemini turns the user's request into preferences; a rule-based engine scores a catalog of 300 songs I labeled by hand.
- Tested with 7 user profiles, including tricky cases; an experiment showed that changing the scoring weights alone made results worse. Documented catalog bias in a model card.

EXPERIENCE

CSUSB AI Research Lab — Undergraduate Researcher (Mentor: Dr. Alzahrani) — Spring 2025

- Co-wrote a proposal for OpportunityScout, an AI agent to match students with internships, scholarships, and research, and built an early prototype with LangChain/LangGraph, a local Mistral 7B model (Ollama), Playwright scraping, and Docker. The project was not completed.

California College Corps — College Corps Fellow, San Bernardino, CA — Aug 2025 – May 2026

- Completed a 450-hour fellowship mentoring middle-school AVID students with one-on-one academic support.

Pollo Campero — Cashier / Team Member, San Bernardino, CA — March 2023 – Present

- Handled orders and payments and served customers in English and Spanish for 3+ years while attending school and transferring to CSUSB.
