EDUCATION

California State University, San Bernardino — B.S. in Computer Science — Expected May 2027
- Minor in Data Science (in progress) | Dean's List every semester

San Bernardino Valley College — A.A.S. in Computer Science — May 2024

SKILLS & CERTIFICATIONS

Languages: Python, JavaScript, SQL, C++, HTML, CSS
AI/ML: RAG, LLM agents, LangChain/LangGraph, Sentence Transformers, ChromaDB, Hugging Face, PyTorch, Gemini, Groq
Frameworks & Tools: React, Flask, SQLAlchemy, Streamlit, Gradio, Pytest, Git, Docker, Supabase, Playwright, GCP
Certifications: CodePath AI Engineering: Applications and Foundations (Honors, 2026); Google Cloud Foundations (2025)
Spoken Languages: English, Spanish (bilingual)

OPEN-SOURCE & CODE-REVIEW EXPERIENCE

PathReview — Open-Source Contributor | *Python*, *Pytest*, *Git* | PR #546 — Summer 2026
- Fixed JavaScript and TypeScript files being misdetected in an ingestion pipeline (Issue #148) by replacing filename-only checks with syntax-based regex; 15 tests passing.
- Caught and fixed a false positive in my own PR, where TypeScript's string type matched the Python str pattern.

CineLog API — Watchlist Feature (code-review simulation) | *Python*, *Flask*, *SQLAlchemy* | GitHub — 2026
- Built a watchlist feature in an existing Flask codebase, going through six rounds of review and reworking my code after an upstream change to how IDs are stored (UUID migration rebase).
- Found a crash the existing tests missed by testing the feature from start to finish, then added a test so it can't come back (8 passing).

PROJECTS

PS5 Game Discovery RAG | *Python*, *Sentence Transformers*, *ChromaDB*, *Groq*, *Gradio* | GitHub — 2026
- Built a RAG pipeline over 10 sources (212 chunks): MiniLM embeddings, ChromaDB retrieval, reranking, and source attribution so each answer shows where it came from.
- Moved to one game per chunk after multi-game chunks diluted the embeddings; scored retrieval and answer quality separately.

VibeCheck — Hybrid AI Music Recommender | *Python*, *Streamlit*, *Gemini 2.5 Flash*, *Pytest* | GitHub — 2025 – 2026
- Gemini turns a user's request into structured preferences, a rule-based engine scores a hand-labeled catalog of 300 songs, and Gemini tries again with looser rules when confidence is low.
- Tested with 7 user profiles, including tricky cases. An experiment showed that changing the scoring weights alone made results worse. Documented bias in the song catalog in a model card.

The Archive — Full-Stack Media Preservation Platform | *React*, *Vite*, *Supabase* | GitHub | Live Demo — 2026
- Launched an app where signed-in users can post, edit, search, vote on, and comment on media, including image uploads. Built a per-user votes table and used Row Level Security so users can only change their own data.

RESEARCH

CSUSB AI Research Lab — Undergraduate Researcher (Mentor: Dr. Alzahrani) — Spring 2025
- Co-wrote a proposal for OpportunityScout, an AI agent that matches students with internships, scholarships, and research. Started a prototype using LangChain/LangGraph, a local Mistral 7B model (Ollama), Playwright web scraping, and Docker.
- Presented progress in weekly lab meetings with my mentor and research partner, and demonstrated the prototype in progress at lab workshops.

EXPERIENCE & LEADERSHIP

Pollo Campero — Cashier / Team Member, San Bernardino, CA — March 2023 – Present
- Worked 3+ years in a bilingual (English/Spanish) customer-service role while attending school and transferring to CSUSB.

California College Corps — College Corps Fellow, San Bernardino, CA — Aug 2025 – May 2026
- Completed a 450-hour fellowship mentoring middle-school AVID students with one-on-one academic support.
