EDUCATION

California State University, San Bernardino — B.S. in Computer Science — Expected May 2027

- Minor in Data Science (in progress) | Dean's List every semester

San Bernardino Valley College — A.A.S. in Computer Science — May 2024

SKILLS & CERTIFICATIONS

Languages: Python, JavaScript, HTML, CSS

AI/ML: RAG, LLM pipelines and tool orchestration, LangChain/LangGraph, Sentence Transformers, ChromaDB, Hugging Face Transformers, Gemini, Groq

Frameworks & Tools: React, Vite, Flask, SQLAlchemy, Supabase, Streamlit, Gradio, Pytest, Git, Docker Compose

Certifications: CodePath AI Engineering, AI110 and AI201 (Honors, 2026); CodePath Web Development, WEB101 and WEB102 (Honors, 2025–2026); Google Cloud Foundations (2025); CodePath AI301 and WEB103 in progress (Fall 2026)

Spoken Languages: English, Spanish (bilingual)

OPEN-SOURCE & CODE-REVIEW EXPERIENCE

PathReview — Open-Source Pull Requests (open, under review) | *Python, Pytest* | PR #546, PR #117 — Summer – Fall 2026

- PR #546: replaced filename-only detection of JavaScript and TypeScript in the ingestion pipeline with syntax-based regex (Issue #148); the existing 18 skill-extractor tests show the same 15 passing before and after. Caught and fixed a false positive in my own PR, where TypeScript's string type matched the Python str pattern.
- PR #117, to CodePath's course copy of the project: added four integration tests for the auth middleware (missing, malformed, expired, and wrong-secret tokens; Issue #38), run with and without Postgres and Redis via Docker Compose to match CI.

CineLog API — Watchlist Feature (code-review simulation) | *Python, Flask, SQLAlchemy* | GitHub — 2026

- Finished and hardened a starter watchlist feature in a Flask codebase through six scripted review comments: duplicate prevention, ordering rules, tests, and a rebase onto an upstream UUID migration.
- Found a crash the existing tests missed by testing the feature from start to finish, then added a test so it can't come back (8 passing).

PROJECTS

PS5 Game Discovery RAG | *Python, Sentence Transformers, ChromaDB, Groq, Gradio* | GitHub — 2026

- Built a RAG pipeline over 10 sources (212 chunks): MiniLM embeddings, ChromaDB retrieval, reranking, then Llama 3.3 70B answering from the top 5 chunks, with source attribution on every answer.
- Moved to one game per chunk after multi-game chunks diluted the embeddings; scored retrieval and answer quality separately.

VibeCheck — Hybrid AI Music Recommender | *Python, Streamlit, Gemini 2.5 Flash* | GitHub — 2025 – 2026

- Gemini turns a user's request into structured preferences, a rule-based engine scores a hand-labeled catalog of 300 songs, and if Gemini rates the results low-confidence the engine drops the energy constraint and rescores.
- Checked with 7 user profiles, including tricky cases. An experiment showed that changing the scoring weights alone made results worse. Documented bias in the song catalog in a model card.

FitFindr — Three-Tool LLM Workflow | *Python, Groq, Llama 3.3 70B, Gradio, Pytest* | GitHub — 2026

- Thrift-shopping assistant: keyword search over a 40-listing marketplace, an outfit suggestion from Llama 3.3 70B, then a fit-card caption. A hand-written loop passes state between steps and stops after the search when nothing matches; 5 tests.

The Archive — Full-Stack Media Preservation Platform | *React, Vite, Supabase* | GitHub | Live Demo — 2026

- Launched an app where signed-in users post, edit, search, vote on, and comment on media, with image uploads to Supabase Storage. Built a per-user votes table and Row Level Security policies so users can only change their own data.

RESEARCH

CSUSB AI Research Lab — Undergraduate Researcher (Mentor: Dr. Alzahrani) — Spring 2025

- Co-wrote a proposal for OpportunityScout, an AI agent that matches students with internships, scholarships, and research. Started a prototype using LangChain/LangGraph, a local Mistral 7B model (Ollama), Playwright web scraping, and Docker.
- Presented progress in weekly lab meetings with my mentor and research partner, and demoed the prototype at lab workshops.

EXPERIENCE & LEADERSHIP

Pollo Campero — Cashier / Team Member, San Bernardino, CA — March 2023 – Present

- Worked 3+ years in a bilingual (English/Spanish) customer-service role while attending school and transferring to CSUSB.

California College Corps — College Corps Fellow, San Bernardino, CA — Aug 2025 – May 2026

- Completed a 450-hour fellowship mentoring middle-school AVID students with one-on-one academic support.
