Computer Science student (CSUSB, May 2027) who builds RAG systems, LLM applications, and full-stack web apps in Python, JavaScript, and React. Open-source contributor, undergraduate AI researcher, and CodePath AI engineering honors graduate. Bilingual (English/Spanish). Seeking new-grad software and AI engineering roles.

EDUCATION

California State University, San Bernardino — B.S. in Computer Science Expected May 2027

- Minor in Data Science (in progress) | Dean's List every semester

San Bernardino Valley College — A.A.S. in Computer Science May 2024

SKILLS & CERTIFICATIONS

Languages: Python, JavaScript, SQL, C++, HTML, CSS

AI/ML: RAG, LLM agents, LangChain/LangGraph, Sentence Transformers, ChromaDB, Hugging Face, PyTorch, Gemini, Groq

Frameworks & Tools: React, Flask, SQLAlchemy, Streamlit, Gradio, Pytest, Git, Docker, Supabase, Playwright, GCP

Certifications: CodePath AI Engineering: Applications and Foundations (Honors, 2026); Google Cloud Foundations (2025)

OPEN-SOURCE & CODE-REVIEW EXPERIENCE

PathReview — Open-Source Contributor | *Python, Pytest, Git* | [PR #546](#) Summer 2026

- Fixed JS/TypeScript files being misdetected in an ingestion pipeline (Issue #148) by replacing filename-only checks with syntax-based regex; 15 tests passing.
- Caught and fixed a false positive in my own PR where TypeScript's string type matched Python's str pattern.

CineLog API — Watchlist Feature (code-review simulation) | *Python, Flask, SQLAlchemy* | [GitHub](#) 2026

- Built a watchlist feature in an existing Flask codebase through six rounds of review and an upstream UUID migration rebase.
- Found and fixed a crash the existing tests missed by exercising the endpoint end-to-end; added a regression test (8 passing).

PROJECTS

PS5 Game Discovery RAG | *Python, Sentence Transformers, ChromaDB, Groq, Gradio* | [GitHub](#) 2026

- RAG pipeline over 10 sources (212 chunks): MiniLM embeddings, ChromaDB retrieval, reranking, source attribution.
- Moved to one-game-per-chunk after multi-game chunks diluted embeddings; scored retrieval and answers separately.

VibeCheck — Hybrid AI Music Recommender | *Python, Streamlit, Gemini 2.5 Flash, Pytest* | [GitHub](#) 2025 – 2026

- Gemini parses requests into structured preferences, a deterministic engine scores a hand-labeled 300-song catalog, and Gemini retries with relaxed constraints when confidence is low.
- Tested on 7 user profiles including adversarial cases; a weight-shift experiment showed reweighting alone hurt results; documented catalog bias in a model card.

The Archive — Full-Stack Media Preservation Platform | *React, Vite, Supabase* | [GitHub](#) | [Live Demo](#) 2026

- Deployed an app where authenticated users publish, edit, search, vote on, and comment on media with image uploads; built a per-user Votes table and enforced ownership with Row Level Security.

RESEARCH

CSUSB AI Research Lab — Undergraduate Researcher (Mentor: Dr. Alzahrani) Spring 2025

- Co-authored a proposal for OpportunityScout, an LLM agent matching students to internships, scholarships, and research; began prototyping with LangChain/LangGraph, a local Mistral 7B model (Ollama), Playwright scraping, and Docker.

EXPERIENCE & LEADERSHIP

Pollo Campero — Cashier / Team Member, San Bernardino, CA March 2023 – Present

- Worked 3+ years in a bilingual (English/Spanish) customer-service role while attending school and transferring to CSUSB.

California College Corps — College Corps Fellow, San Bernardino, CA Aug 2025 – May 2026

- Completed a 450-hour fellowship mentoring middle-school AVID students with one-on-one academic support.
